GitHub

## LANGUAGE

Arabic  
English

Ability to utilize **Balsamiq** software for creating wireframes and mockups for visualizing the web application user interface and follow the agile methodology in order to meet and satisfy the customer requirements and changes if needed.

## Projects

### Python GUI Registration Project

(Check my [Portfolio Page](#) for the download link)

This project is utilized for the purpose of registering students.

It is created by using the Graphical User Interface (Tkinter) and using the structured query language to manage where the data will be stored.

It has 2 types of sections of code:

- The Frontend code: Which has the graphical user interface code which creates the labels, buttons, texts or options in which the user reacts with it.
- The Backend code: Which has the structured query language where it creates the database file and stores the data entered through the Tkinter GUI to the database file, it is also used to connect GUI with SQL.

### Skills Include:

Operating System and Structure Programming  
Generally Accepted Accounting Principles (GAAP)  
Business Administration  
Economics  
Business Mathematics and Operations Research
